

TRAFFIC LIGHT SETTING:

ORANGE

COVID-19 RISK MATRIX:

Is this person safe to be at work?

The COVID-19 Public Health Response (Vaccinations) Order 2021 requires all health and disability workers who face a high risk of exposure to COVID-19 to be vaccinated. This matrix assumes all clinical staff and non-clinical staff (in close contact service roles) are fully vaccinated.

This is an advisory based on risk assessment and should be read alongside [this explanation](#).

UPDATED 28 FEBRUARY 2022	GENERAL PRACTICE STAFF		ADVICE FOR YOUR PATIENTS		
Health condition	Close clinical contact with SYMPTOMATIC patient (red stream)	Close clinical contact with ASYMPTOMATIC patient (green stream)	Member of the public working in an area with exposure to the public where unable to maintain physical distancing (e.g. aged residential care)	Member of the public working in an area with exposure to large numbers of the public but able to maintain physical distancing (e.g. bus driver, supermarket worker, border control)	Member of the public working in an essential service with exposure to small numbers of the public and able to maintain physical distancing (e.g. office worker, electrician)
Over the age of 70 years?	no	yes	yes	yes	yes – if approved by business owner
Pregnant or breastfeeding?					
Pregnancy over 28 weeks	no	yes	yes	yes	yes – if approved by business owner
Pregnancy under 28 weeks with a heart or lung condition	no	yes	yes	yes	
Pregnancy under 28 weeks without a heart or lung condition	no	yes	yes	yes	
Breastfeeding	discussion needed	yes	yes	yes

Do you have a condition or medicine that affects your immune system?					
A number of conditions can leave a patient immunocompromised, and these include HIV infection, some cancers, specific immune deficiency diseases, and patients undergoing organ transplants. Each of these patients should be assessed on an individual basis but as a guide:	no	yes	yes	yes	yes – if approved by business owner
For those taking immunomodulating and suppressing drugs, the nature of the underlying condition should be the determining factor rather than the drug. The one notable exception to this is the use of glucocorticosteroids, particularly with long-term use of prednisone or similar drugs at a dose higher than 10mg per day	discussion needed	yes	yes	yes
